Important Note: Will be not look for answers outside the answer sheet

Question 1: Mark for True statements and for False statements:

1	Most social networking Web sites include chat rooms, newsgroups, & other communications services
2	Information is a collection of unprocessed items, which can include text, numbers, images, audio.
3	Current processors include advanced transfer cache, a type of L3 cache built directly on the processor chip.
4	All e-commerce actually takes place between businesses, which is called business to business e-commerce.
5	A font is a name assigned to a specific design of characters.
6	Animation is a full-motion images that are played back at various speeds.
7	A dialog box is a window that provides information, presents available options, or requests a response.
8	Open source software is mass-produced, copyrighted retail software that meets the needs of a wide variety of users, not just a single user or company.
9	Word processing software provides a means for sharing, distributing, and searching through documents by converting them into a format that can be viewed by any user.
10	Registers holds data waiting to be processed and instructions waiting to be executed.
11	An input device is any hardware component that allows users to enter data and instructions into a computer.
12	The System Clock speed is measured by the number of ticks per second.
13	A Memory card is a flash memory storage device that plugs in a USB port on a computer or mobile device.
14	A touchpad is a small, flat, rectangular pointing device that is sensitive to pressure and motion.
15	An all-in-one device is a single device that looks like a printer or a copy machine but provides the functionality of a printer, scanner, copy machine, and perhaps a fax machine.
16	The ALU directs and coordinates most of the operations in the computer.
17	For each instruction ,computer performs four basic operations(Fetch, decoding ,controlling and storing) which comprise a machine cycle.
18	Web pages rarely have built-in connections, or links, to other documents, graphics, other web pages , or web sites.

Question 2: Choose the correct Answer

1	A(n) ___ is a business that provides individuals & organizations access to the Internet free or for a fee. a. Wi-Fi b. Satellite c. Access Provider d. Internet2
2	Ink-jet printer resolution is measured by the number of ___ a printer can print. a. pages per minute (ppm) b. pixels per inch (ppi) c. lines per minute (lpm) d. dots per inch (dpi)
3	___ is a method that uses multiple processors simultaneously to execute a single program or task. a. Serial processing b. Multi CPU c. Parallel processing d. None of the above
4	___ holds data, instructions, and information for future use. a. Storage b. Modem c. RAM d. None of the above
5	A ____ (short for binary digit) is the smallest unit of data the computer can process. a. Bit b. Byte c. KB d. System unit
6	A ___ is a color printer that produces photo-lab-quality pictures. a. Photo printer b. Laser printer c. Label printer d. Mobile printer

7	___ is part of the motherboard and connects the processor to main memory. a . Expansion bus b. System clock c. Front side bus d. None of the above
8	An ___ is a special-purpose computer that functions as a component in a larger product. a. Servers b. Mainframe c. Embedded computer d. None of the above •
9	_____ is a collection of individual programs available together as a unit. a. A software suite b. Shareware c. Custom software d. None of the above
10	__ is the computer’s capability of distinguishing spoken words. a. Voice input b. VoIP c. MIDI d. Voice recognition
11	A ___ is a small symbol on the screen whose location and shape change as a user moves a pointing device. a. Touch-sensitive pads b. Pixels c. Pointer d. None of the above
12	__ is the TLD of (www.google.com) a. www b. google c. com d. None of the above
13	16 PB _____ bits a. 2^{57} b. $16 \times 1024 \times 1024.8$ c. 2^{53} d. None of the above
14	__ is an Internet standard that permits file uploading and downloading with other computers on the Internet. a. HTTP b. FFTP c. FTP d. DNS server
15	__ are needed to store ” Http://www.alazhar.edu/ “ in the memory(Using Unicode) a. 23 bits b. 22 bytes c. 23 bytes d. None of the above
16	__ is the representation of “CDFE” in the memory (ASCII code for A=65 and a =97) a. 100001110001001100101110011 b. 010000110100 01000100 01100100 0101 c. 1000011100010011001011100100011 d. none of the above

Question #3: Match the terms with their definitions

A	Allows the various devices both inside and attached to the system unit to communicate with each other.	1__	Trackball
B	is a small ceramic or metal component with fins on its surface that absorbs and disperses heat produced by electrical components such as a processor.	2__	a digital camera
C	is a mobile device that allows users to take pictures and store the photographed images digitally.	3__	Active-matrix display
D	is the point at which a peripheral attaches to or communicates with a system unit .	4__	Resolution

E	The computer automatically can configure adapter cards and other peripherals as you install them.	5__	Clip art
F	involves reducing the electricity consumed and environmental waste generated when using a computer.	6__	Adapter card
G	is a collection of electronic drawings, photos, and other images.	7__	OMR
H	is a type of storage with no moving parts.	8__	Access time
I	uses one transistor for each pixel of LCD monitor.	9__	heat sink
J	is the number of horizontal and vertical pixels in a display device.	10__	port
K	Joins a cable to a port & one end of a cable attaches to a port on the system unit.	11__	Touchpad
L	is a stationary pointing device with a ball on its top or side.	12__	Bus
M	is small, flat, rectangular pointing device.	13__	Plug and Play
N	is a computer, usually with limited processing power, that enables users to send data to and/or receive information from a host computer.	14__	Scanner
O	enhances functions of a component of the system unit and/or provides connections to peripherals.	15__	Connectors
P	is the amount of time it takes the processor to read data, instructions, and information from memory.	16__	Green computing
Q	is a light-sensing input device that reads printed text and graphics and then translates the results into a form the computer can process.		
R	Cutting is the process of removing a portion of the document and storing it in a temporary storage location, sometimes called.		
S	is a technology that reads hand-drawn marks such as small circles or rectangles.
